

## TRINITY CYBER AT A GLANCE

# Don't discover breaches. Deny them.

## Active Network Defense With Context-Aware Control

### The Edge Security Functions You Expect. Radically Enhanced.

#### Zero Trust (ZTNA)

Replace legacy VPN with real zero trust that uniquely inspects and remediates traffic in real-time.

#### Cloud Firewall (FWaaS)

Replaces costly NGFW threat licenses. Includes differentiate bidirectional protection, destination NAT, and dedicated IP with no upcharges.

#### Intrusion Prevention

The industry left IPS for dead. We transformed it. FCI surgically removes threats and preserves clean content with sub-millisecond latency. No tuning required.

#### Superior Visibility and Full Forensics

Unlike competing SSE solutions, only Trinity Cyber delivers full packet capture (PCAP) for comprehensive visibility.

#### Performant Points of Presence

Supports one of the world's three largest enterprise networks, and customers in manufacturing, retail, education, and more.

#### Secure Web Gateway (SWG)

Inspects + filters web traffic and enforces security policies, including URL filtering, geo-blocking, and more. Only Trinity Cyber inspects web content to the sub-object level — files, code, scripts — surgically removing threats in real-time.

### Simple Deployment to Replace Your VPN

#### Connect

Establish connection via IPsec tunnel or ZTNA client to our points of presence.

#### Enable TLS

Accept our certificate for fully managed decryption service. Bypass sensitive categories + sites — anything you choose. We retain nothing.

#### Protect

Access the portal for real-time visibility, PCAP search, and SIEM integration.

## About Trinity Cyber

Trinity Cyber is redefining cybersecurity with its groundbreaking Active Network Defense platform, removing threats from live traffic before they ever reach your network. Founded by seasoned technologists and threat analysts, the company brings deep expertise in defending against nation-state-level adversaries.

## Why Choose Trinity Cyber

Conventional SSE platforms miss threats and rely on hashes, signatures, and shallow heuristics. You're left overwhelmed, burdening your EDR, and burning out your team. Trinity Cyber's Active Network Defense Platform takes a different approach, meeting adversaries in the network where they operate, before threats are in your environment.

## Less Risk With Less Cost

### Precise, Preemptive Action:

Trinity Cyber's Full Content Inspection™ (FCI) engine surgically removes threats from live traffic, preventing attackers from establishing presence; legitimate traffic continues uninterrupted.

### Alertless by Design, With Full Transparency:

Threat mitigation is automated, with no alerts. No triage, escalation, or manual intervention — while your team retains full visibility, control, and confidence.

### High-Fidelity Visibility Without Disruption:

The industry left IPS for dead. We transformed it. FCI surgically removes threats and preserves clean content. Sub-ms latency delights users. No tuning required.

### Fully Managed SSE:

Delivered as a cloud-based, fully managed Security Service Edge service. No deployment, tuning, or maintenance required.

### Lower Costs:

Tool consolidation, less triage, and fewer incidents. EDR returns to its intended role as a last line of defense. Alert volume and operational costs decrease.

## Trusted at Scale
