TRINITY CYBER

Full Content Inspection:

The new network security standard — and why you need it

THE PROBLEM

Reactive Legacy Security Falls Short

Busy IT and security teams must operate efficiently, not with a reactive, costly, and slow "detect and respond" posture. Traditional tooling isn't helping: SSE, NGFW, IPS, and secure web gateways miss too many threats and flood teams with too many alerts and false positives. What's needed are accurate, comprehensive, and real-time threat detections that enable business uptime and strong data protection.

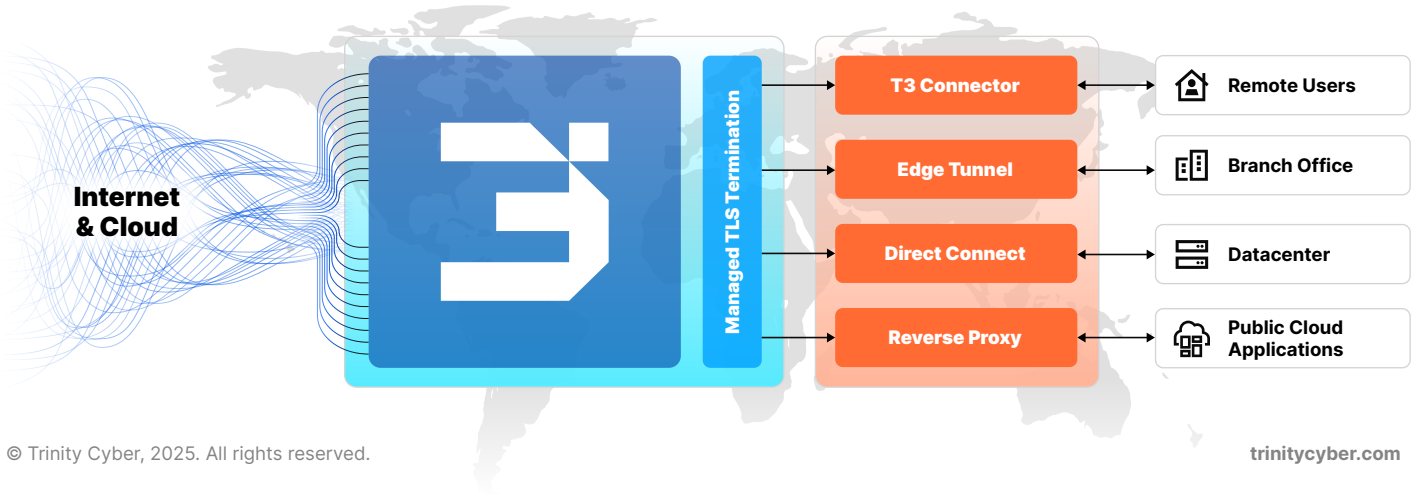
- Ransomware accounts for **1 in 4** breaches.[1]
- External attackers can breach an organization's perimeter in **93%** of cases.[2]
- **62%** of alerts received in security operations centers are ignored.[3]

THE SOLUTION

Full Content Inspection

Our patented Full Content Inspection (FCI) capability is proven, protecting over three million users today. FCI inspects live traffic inline. It removes threats in real-time, reconstructing traffic before it reaches your network and endpoints — ensuring operational resilience and data security. It catches what legacy sensors miss, as we focus upon adversary techniques, tactics, and procedures (TTPs).

FCI is the most effective anti-hacking tool available today, because it puts the power of prevention back in the hands of defenders.



The Power of Real-Time Prevention: React Less, Stop More

FCI offers a smarter approach to cybersecurity.

Prevent Cyber Attacks Before They Happen

Stop threats at the network level instead of responding after the fact.

Unmatched Accuracy

Detect and remove every common vulnerability and exposure on the CISA Known Exploited Vulnerability list.

Reduce False Positives and Alert Fatigue

Less than .01% false positive rate, compared to 30%+ in traditional systems.

Proven Success at Scale

Millions of threats neutralized across petabytes of data.

Bolster or Replace Ineffective Security Tools

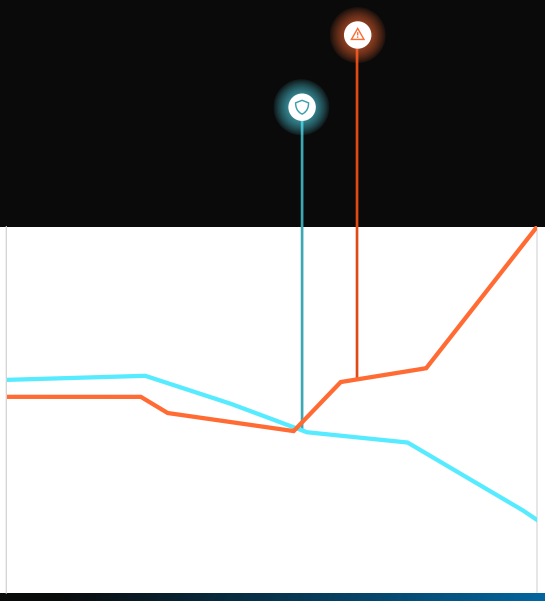
Actively target threats that detective and preventative controls like NGFW, IPS, SWG, and WAF solutions miss.

Fully Managed Detection and Prevention

Easily accessible protection maintained by the cybersecurity experts at Trinity Cyber.

Automated, Real-Time Threat Mitigation

Neutralize threats inline with near-zero latency.



Cyber Threats Are Evolving, Your Security Should Too

Ready to Stop Hackers in Their Tracks?

Discover how FCI can revolutionize your cybersecurity strategy.
